AI Governance for Enterprise

Governance-first infrastructure that makes AI outputs auditable, explainable, and enterprise-deployable

WORKING DEMOS

What's Built

Five working AI governance demos deployed and tested. Constitutional runtime with policy gates, bias detection, audit logging, and human-in-the-loop escalation workflows.

What Makes It Different

This is a governance layer that sits **above** foundation models, not a wrapper. Architecture-level innovation designed for enterprise deployment, auditability, and transparency.
